

Expanded Metal Fencing

CLADEX

The **CLADEX** expanded metal fencing system is designed primarily as an economic upgrade system for situations where mesh on an existing fence is in disrepair but the posts are still good. Cladex can be fitted onto these existing posts, using a standard range of fittings, to produce a new fence at much less cost than having to install new posts and mesh. The expanded metal mesh fabric of Cladex is formed from sheet steel, without any welds, making it a highly durable and vandal resistant form of perimeter protection.

CLADEX

specification

Why specify CLADEX?

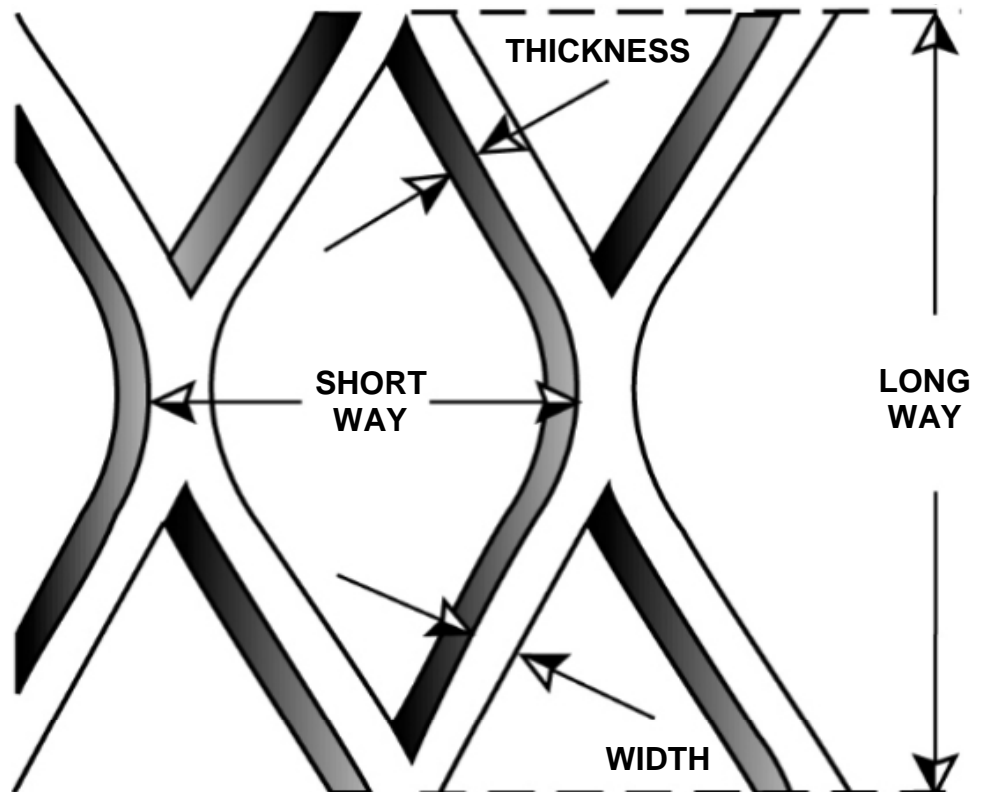

- Cost effective
- Durable
- Vandal resistant
- Adaptable

Common Applications:
